## Nursing Implementation Plan

# THE digitalisation OF nursing documents

A national project has been established to transform nursing documentation by digitising forms and making them available for completion on mobile devices.

This ward has been chosen to pilot the first phase of this process, together with wards in every health board in Wales.

This ward will complete adult inpatient assessments and the core risk assessments of:

**FALLS, SKIN PRESSURE DAMAGE, PAIN, CONTINENCE, NUTRITION AND MANUAL HANDLING**

using the latest tablet based technology instead of paper forms.

The lessons we learn from here and the other pilot wards will directly impact the future development in the **digitalisation of nursing documents and the national roll-out of these digital documents**. This is an exciting opportunity to influence this vital work and your participation and feedback will be very valuable.
