DATA STANDARDS CHANGE NOTICE

Introduction

District nursing services in Wales have a wide and varied remit, the service is supplied by all 7 health boards in Wales. On an all-Wales basis there is electronic scheduling of activities undertaken by District Nursing Services. Roll out has been phased across all seven health boards with all DN teams using an e-scheduling system by March-2023.

The initial term for the supplier of the current system is due to end March-24 and a procurement exercise is currently being undertaken, as such the work for the data standards has been system agnostic to ensure that the outcome of the procurement has no impact on the required data standards for district nursing services.

This standard focuses in the main on the data items required to undertake electronic scheduling in district nursing services across Wales. However, where appropriate, some additional data items outside of the remit of scheduling but critical to district nursing services generally have been included.

This work is aligned to the community infrastructure workstream in the Strategic Programme for Primary Care. It is acknowledged that the standard will need to be revisited in future to ensure the availability of data nationally and alignment with other programmes of work. The "DN National Digital Design Project" led by DHCW has been working in conjunction in the development of this data set. Scheduling incudes all activities regardless of the level of interaction with a patient, i.e., includes direct patient, indirect patient and supervisory activities. All district nursing teams across Wales will be required to collect information required detailed in this data set from the implementation date.

The phases proposed currently are:

- 1. Creation of the data standard for the minimum set required for scheduling activity.
- 2. Expanding the data standards to include information from other complimentary work programmes.

By utilising the learning and recommendations provided by service providers and teams, the aim of a standardised data set that can inform a reporting system will be to:

- Improved patient outcomes.
- Benefit service providers and teams.
- Provide useful validated data on district nursing activity for planning and management purposes.
- Provide an expanded reporting framework that can be used for monitoring purposes by officials and ministers.
- Be used as a foundation for developing action plans to translate data into meaningful action to improve services as well as address any identified issues.
- Support financial and service strategy.

Whilst health boards are currently all using the same system for scheduling, HB's also use other systems to capture data items relating to district nursing which they may wish to use to extract the required data items in line with the prescribed data standards.

Action Required

Health Boards:

- Ensure that local processes and systems have been updated to comply with the standard set out in the Information Specification within this DSCN.
- Work with Strategic Programme for Primary care/NHS Wales Executive to:
 - Follow a structured mechanism so that all coding changes are reviewed and approved for national use, ensuring that reporting is standardised and accurately interpreted to reflect the situation in Wales.
 - Work with software solution providers to ensure adoption of the Standard in any future software development or procurement for the collection and transfer of such information.
- Development of data pipelines to ensure that information can be sent and centrally collated, arrangements for this by August 2024.

Digital Health Care Wales:

• Development of data pipelines to ensure that information can be received and centrally collated, arrangements for this by August 2024.

Appendix A: Table reflecting areas that are impacted as a result of this DSCN

The following table shows where there are changes to the scope and/or definitions of applicable data sets, data items, terms and other associated areas that are linked with the changes documented within this DSCN.

Each data definition type is listed in alphabetical order and is shown in the sequence in which it appears in this DSCN.

Data Definition Type	Name	New/Retired/ Changed	Page Number

Appendix B: Following highlighted changes to be made to the NHS Wales Data Dictionary

Changes to the NHS Wales Data Dictionary are detailed below, with new text being highlighted in **blue** and deletions are shown with a **strikethrough**. The text shaded in **grey** shows existing text copied from the NHS Wales Data Dictionary.

District Nursing Services Scheduling Dataset

Scope

The District Nursing Scheduling data set captures data for all scheduled activities undertaken by DN service, regardless of the patient's area of residence. All HB's providing DN services are included.

Once added to the district nursing caseload a patient may have several contacts with the DN service until discharged from the caseload. All scheduled activities, including direct patient activities, indirect patient activities and supervisory activities are included.

<u> Data group – Patients Details:</u>

<u> Data item – NHS Number</u>

It is mandatory to record the NHS Number for each patient registered with a GP practice in England and Wales. The NHS number is allocated to an individual, to enable unique identification for NHS health care purposes.

This NHS Number format was mandated for use effective 1st November 1997. Prior to this, the NHS Number was an alphanumeric code which ranges in size from 10 - 17 character.

If known, the patient's Health and Care Number should be used to populate this field for patient's resident in Northern Ireland.

If known, the patient's Community Health Index (CHI) Number should be used to populate this field for patients resident in Scotland.
